

accuracy	precision	recall	f1
0.85	0.82	0.8	0.81

The evaluation metrics show pretty well-balanced performances across accuracy, precision, recall, and F1 score, which all hover around the 0.80-0.85 range. Accuracy is the highest at 0.85, which means the model performs well overall, while precision and recall are slightly lower but still strong. The F1 score at 0.81 shows a good trade-off between precision and recall, which suggests that the model is consistent without favoring one over the other.
